

Here's how **Sterling Grace Technologies** can help you Solve your Top Organizational Challenges...

Pick your top 5-7 most important priorities and return to info@sterlinggracetechologies.ca

Secure Your Network:

1. Remote monitoring of your workstations, suspicious or unsafe browsing behavior, new software installs on your network, automatic software patches
2. Industry leading Antivirus secures your network. Firewalls protect your machine from remote threats. Remote monitoring shows who's overdue for a scan, when their last update was, and more.
3. Monitor website browsing and traffic. Lock down specific sites and report on browsing habits.
4. Access your work desktop, files, and intranet websites from home using a secure VPN.

Redundancy, Backups, Disaster Recovery:

5. High availability and redundancy through server clusters. If one physical server fails, your virtual machines automatically move to the other server with NO service interruption from your team's perspective.
6. Onsite backup for rapid recovery. Offsite backup for when your office burns down. Daily backups, tested daily. Peace of mind.
7. Disaster recovery can take time, but you won't have to close your business while doing it. Instantly start mission critical servers in the cloud from offsite backup.
8. State-of-the-Art Data Recovery Tools. If your harddrive is busted, we might still be able to get that mission critical data off of it.

Hosting and Retail:

9. Expert Guidance when evaluating new software and hardware. Tracking hardware lifecycles to ensure you stay up to date.
10. Low priced software and hardware. Match or beat Staples prices.
11. Industry leading Email and Website hosting
12. Cloud hosting so you don't break the bank with on-site servers and infrastructure

Efficiency and Custom Solutions:

13. Virtual machines let you run multiple servers (Accounting, Domain Controller, Customer Software, VPN) on a single physical hardware server
14. Thinstations get you up and running with new workstations instantly without all the setup.
15. Regular cleanups of your team workstations to make sure they run faster
16. Regular site visits. Give your team face-time with your IT department helps them get their problems fixed quicker and makes them more productive
17. Build custom software for your unique business, saving you time and money.
18. Software integration, making all your systems talk to each other and saving you duplicate data-entry

Technology Expertise and Quality Service:

19. We diagnose and get you the best information possible, so you know exactly what's wrong even if the problem is with a 3rd party. You won't get bounced around to multiple vendors refusing to take responsibility.
20. No more unexpected fees. All-inclusive technical support plans priced per-User. Save your budget!
21. An IT company that works to understand your business, trains you on your software, or helps you find better software.
22. An IT team that answers their phone after hours, weekends, while you're on vacation
23. You know printers SUCK - But we're the Printer Whisperers and get you printing again FAST
24. Get remote support from your IT experts. Anywhere, anytime.
